

## Case Study

# Casino Restroom Odour Remediation - Las Vegas

### The Background

A major casino and hotel property in Las Vegas had tried every restroom odour control system on the market without success.

### The Challenge

Although this property had tried installing as many as 22 dispensers per restroom and supplemented this with hand spraying during peak periods, the restrooms were still very unpleasant.

### The Solution

Prolitec replaced 22 traditional dispensers with 2 Air-Q 200 appliances in the most difficult restroom. A proprietary odour remediation agent targeted at fecal-urine odours was used, along with a fresh and clean scent.

Following a 3 week trial during which time all hand spraying was discontinued, Prolitec was awarded a three year contract for restroom hygiene services in all sixteen restrooms in the casino and convention complex. Today Prolitec provides all of the restrooms and casino gaming areas in the entire facility with both odour remediation and ambient scenting services.
