

Case Study

Odour Remediation - Fitness Centre

Background

The childrens exercise, play and fitness centre in a major Florida time-share facility had an odour problem attributed to the plastic play structure combined with human perspiration. The problem was so severe the are was removed from the facility tour provided to prospective clients.

Approach

Prolitec installed its odour remediation service in the HVAC using a targeted odour remediation agent which eliminated all malodours.

Conclusion

Resort management was so impressed with the outcome, they wrote to Prolitec to report:

“The equipment and scent has performed beyond our wildest expectations. Your equipment and technical support have allowed us to overcome a serious odour problem in a critical area of our resort operation and to do so in a cost-effective manner.”
