

Case Study

Odour Remediation & Ambient Scenting Hard Rock Casino

The Background

The Hard Rock Casino has more than 100,000 square feet of playing area.

The Challenge

They had a persistent, severe tobacco odour problem despite aggressive cleaning and state-of-the-art filtering and fresh air ventilation systems.

The Solution

Prolitec conducted a trial in a 5,000 square foot cocktail lounge area that presented a particularly difficult odour problem. Using an odour remediation agent targeted at residual cigarette smoke odours and a fragrance selected by management to match the hotel amenities scent, Prolitec completely eliminated the malodours and provided the pleasant and memorable scent chosen by casino management.

Following a month long trial and evaluation by management, Prolitec was awarded a three year contract for odour remediation and ambient scenting services throughout the hotel lobby, gaming and adjacent areas.

After a further ninety days, Prolitec was awarded a second three year contract for another facility of equal size.
