

Case Study

Odour Remediation & Ambient Scenting Hotel Elevators & Lobbies - Midwestern United States

The Background

A leading hotel in a large US city has an indoor pool and water park. One guest tower shares an elevator shaft with the water park. The chlorine odours permeated the elevators and wafted onto the guest floors.

The Challenge

The hotel asked Prolitec to eliminate the chlorine odours in the elevator shafts as well as add a light scent to their lobby.

The Solution

Four appliances were installed in the elevator shafts and upper and lower lobbies.

The smell of chlorine was successfully eliminated from the elevators and the lobbies now smell like fresh flowers.
